Physicist (Master in Space Systems, **GPA 8.5/10**, thesis 9.5/10) moving into **quantitative research & trading**. Studied how two prediction markets price the same Bitcoin hour with a cross-venue data-capture system I designed; validated the effect on 1,350 real settlements and published it as an SSRN research note. **Available now for internships**; planning an M.Sc. in quantitative finance from autumn 2027.

Education

Master in Space Systems (Máster de Formación Permanente, 60 ECTS) — Universidad Europea 2025 – 2026
GPA 8.5/10

- **Master's Thesis (9.5/10):** fuel-optimal guidance for autonomous rocket landing — posed the final 2 km of powered descent as a **convex program (SOCP)** via lossless convexification, optimized the flight time over a sweep of convex solves and flew the solution in a self-built **3-DoF simulator**. Reproduced a published Mars-lander benchmark (75 s, 373.76 kg of fuel, bang-bang thrust); same convex-guidance family as SpaceX booster landings. Interactive demo

B.Sc. in Physics — Universidad Complutense de Madrid (bilingual Spanish/English program) 2021 – 2025

- **Bachelor's Thesis (9.2/10):** multi-agent **Bayesian search** — coordinated agents locate the maximum of an unknown field via **Gaussian-process (Kriging) regression**, balancing exploration vs. exploitation under uncertainty. Selected for Docta Complutense (UCM's distinguished-thesis repository). Interactive demo
- Coursework: mathematical methods, statistical physics, scientific computing, probability & statistics; quantum-computing program (3 algorithms implemented in **Qiskit**)

Experience & Projects

Independent Quantitative Research — Cross-Venue BTC Oracle Basis (Polymarket / Kalshi) Feb – May 2026

- Discovered a **systematic, signed cross-venue mispricing** in hourly Bitcoin prediction markets: the two venues settle on **different oracles** (Binance USDT vs. CF Benchmarks USD), so their implied strikes disagree by the **USDT/USD stablecoin basis** — signed and forecastable before each hour resolves
- Validated the mechanism on **1,350 real Kalshi settlements**: an offset-aware entry rule **removes the double-loss tail** (4.6% $\rightarrow$ 0%) and isolates the $\sim$21% regime where both legs can win; characterized the two-sided cost distribution from live orderbook capture. Published it as a research note on SSRN, with an interactive companion
- Designed the 24/7 data-capture system behind the study, running on **AWS eu-west-1 (Ireland)**: live order-book capture from both venues and settlement tracking

Flight Dynamics Intern — PLD Space (launch-vehicle company, Elche, Spain) Mar – Apr 2025 & Jun – Aug 2025

- Built **MATLAB** tooling that automated recurring flight-dynamics analyses; reworked the **numerical surface-discretization scheme** behind the vehicle's aerodynamic force integration, improving its accuracy

Co-founder & Sole Developer — Bolbee, AI marketing platform (incubated by MyBookUp) Oct 2025 – Aug 2026

- Built the full product end-to-end (Next.js, Supabase, Stripe, multi-model AI pipeline) — architecture, data model, infrastructure, integrations. Funded by MyBookUp, which employed us under contract while we built it (partners' agreement in place); reached a private beta with 20 active users, then chose not to launch when the funding ended

Team Lead — Exoplanet Detection with ML, NASA Space Apps Challenge (Madrid) Oct 2025

- Led a 3-person team building a neural-network exoplanet classifier on NASA telescope data (**Python**): split the work by strengths, prepared the data with a teammate (selected and standardised the fields of NASA's exoplanet tables) and agreed the train/test split with the teammate who built the model; delivered a working model in 48 h with $\sim$88% classification accuracy

Additional Information

- **Programming:** Python (NumPy, pandas), MATLAB | **Tools:** Git, AWS, REST APIs
- **Quantitative:** convex optimization, probability & statistics, market microstructure, Gaussian processes, Monte Carlo methods, control & estimation theory, numerical optimization
- **Languages:** Spanish (native), English (C1, Cambridge CAE 186), Catalan (C1), French (A2)
- **Honors:** merit scholarship covering full first-year university tuition (ranked 1st in graduating high-school class); high-school average 9.95/10 with Matrícula de Honor; university entrance exam (EBAU) 9.74/10
- **Community:** create QuantMeraki, a Spanish-language YouTube channel explaining quantitative finance; private tutor for students preparing for the final year of high school and the university entrance exam (EBAU); volunteered in the relief effort after the 2024 Valencia floods (DANA)
- **Interests:** training for a sprint triathlon; music — composed a piano piece and performed it at a public concert in Alicante, and I write, sing and produce my own songs; poker with friends and occasional tournaments
